

# Simple Loop Antenna for RDF

Posted on [July 22, 2019](#)

K1RMN Bob made a simple Loop Antenna for 2 meters.

1/4" tubing , 1/2" PVC tee and pl-259 ct. Made an 8" loop , attached the loop ends to the cut away tee. Opposite side I cut the tubing and used shrink tubing to connect the loop together with a 1/2" space. Connected it to the radio and listened to the Rason Vhf Uhf net and as I turned the loop the bull spot was 180 degrees out from the repeater direction. Works great.
